

Every destination Coliaty publishes, matched — and where the network should grow next

Silacod holds 5,830 Moroccan localities and resolves whatever a customer types onto one of them before a parcel is created. This report checks that work against Coliaty’s own published catalogue rather than against our copy of it: every one of the **444 destinations** Coliaty lists is matched, carries Coliaty’s city_id, city_code and hub, and survives a round trip back to the same id. It then sets out what we are asking Coliaty for — **160 cities** to add, **6 hub sites** to open, and the catalogue data that would close the gaps we cannot close from here.

444/444 destinations matched	451/451 names round-trip to the same id	160 cities proposed	6 hub sites proposed
--	---	-------------------------------	--------------------------------

Three claims, each measured further down. **1.** Matching works: 451 of 451 carrier names resolve correctly, and so do all of them under uppercasing, accent-stripping, ‘, Maroc’ suffixes, hyphenation and removed spaces — 3,895 of 4,020 tests across nine input shapes. **2.** Parcels leave under Coliaty’s spelling, not ours: 141 cities are stored under a different display name and are translated at the wire. **3.** The remaining gaps are in data Coliaty holds and we do not — 46 destinations have no position, 63 sit more than 120km from their hub’s centre, and 27 Arabic-script entries cannot be matched at all.

Grey dots are served cities within tolerance and red dots are served cities sitting more than 120km from their hub’s median centre. Hollow amber rings are cities we are proposing. Numbered teal crosshairs are today’s hubs; lettered amber squares are proposed hub sites, each drawn with the 70km radius it would cover.

How a typed name becomes a Coliaty destination

A city reaches us from a landing page, a Shopify or YouCan webhook, a CSV import or a call-centre agent typing it by hand. All four go through the same four passes, in this order. The first pass that answers wins, and each pass is deliberately narrower than the one before it.

	PASS	RULE	WHY IT IS SHAPED THAT WAY	CARRIER NAMES RESOLVED HERE
1	Clean	Strip integration noise	A trailing country qualifier is removed — “Agadir, Morocco”, “Casablanca - Maroc” — and whitespace is collapsed.	—
2	Slug	Exact match on a normalised key	Lowercased, unaccented, punctuation and spaces removed. Spaces go rather than collapse because the separator is the least reliable part of a Moroccan name: El Jadida, El-Jadida and Eljadida are all in live data and must land on one row.	374
3	Alias	Look the key up in the spelling dictionary	253 recorded variants point at a canonical row — the carrier's own spellings, OpenStreetMap's, and spellings first seen in our own order history.	77
4	Fuzzy	Edit distance, with tolerance scaled to length	Nothing for a name of 5 characters or fewer, one edit up to 9, two beyond that. A flat threshold turns Saka into Safi, so short names get no tolerance at all.	0

The fuzzy pass is switched off at the wire. It exists to guess what a human meant while an order is still being edited, where a wrong guess is visible and correctable. On dispatch we match on the exact key only: a guess there would route a parcel to a hub that cannot serve it, and a silently misrouted parcel is worse than one Coliaty rejects by name. Anything unresolved is sent through untouched, so a city this cannot improve behaves exactly as it did before.

The wire rule: parcels leave under Coliaty's spelling

OpenStreetMap gives us the accented French form and Coliaty ships plain ASCII, so the two sides name the same place differently by design. **141 of the 444 destinations** are stored under a display name that is not the carrier's (111 differ by more than letter case). Every one is translated back to `city_name` verbatim at hand-over, alongside `city_id`. A sample:

SHOWN TO THE OPERATOR	SENT TO COLIATY	CITY_ID	CODE	HUB
Aïn Bni Mathar	Ain Beni Mathar	8348	abm	OUJDA
Aïn Dorij	Ain Dorij	6962	ADJ	TANGER
Aïn Reggada	Ain Regada	8300	nrg	OUJDA
Aït Amira	Ait Amira	6614	AMR	AGADIR
Ait Baha	Ait baha	9164	ATB	AGADIR
Aït Ben Haddou	Ait Benhdou	8432	atd	OUARZAZAT
Ait Hattab	Ait Attab	9484	ATTB	BENIMELLAL
Aït Ishaq	Ait Ishaq	7826	ISHAQ	BENIMELLAL
Aït Kamra	Ait Kamara	9488	AKMR	AL HOCEÏMA
Aït Melloul	Ait Meloul	6620	AML	AGADIR
Al Hoceïma	Al Hoceima	6908	AHC	AL HOCEÏMA
Al Kamoun	Al Kamouni	7196	KAMOUN	Khemisset - Tifelt
Aourir	Awrir	6728	AWR	AGADIR
Arfoud	Erfoud	8630	arf	ERRACHIDIA
Beni Bouayach	Bni Bouayach	6920	BBY	AL HOCEÏMA
Beni Boufrah	Bni Boufrah	9491	BBH	AL HOCEÏMA

125 further translations are applied and not listed here; the full mapping is in the directory at the back, column *Sent to Coliaty*.

Evidence that the matching holds

Three independent checks. The first asks whether we hold every destination; the second whether the carrier's own spelling comes back out as the same id it went in as; the third whether that survives the shapes a city field actually arrives in.

1 Catalogue linkage

444/444 destinations held on our side	444/444 on the same hub as Coliaty	444/444 carrying the same city code	0 unresolved discrepancies
---	--	---	--------------------------------------

2 Round trip

Each of the 451 names in Coliaty's catalogue was pushed back through the same resolver a live order uses, and checked to land on the row carrying that `city_id`. **451 of 451 returned to the id they started from** — 374 on the exact key, 77 through the alias dictionary, and none needing the fuzzy pass.

3 The shapes a city field actually arrives in

Every carrier name was re-tested under each distortion below, derived from what live data contains: checkout forms that shout, exports that strip accents, integrations that append the country, agents who omit spaces, and ordinary one-key typos.

INPUT SHAPE	EXAMPLE	RESOLVED TO THE RIGHT DESTINATION	RATE
verbatim	Ait Meloul	451 / 451	100.0%
uppercase	AIT MELOUL	451 / 451	100.0%
lowercase	ait meloul	451 / 451	100.0%
accents stripped	Kenitra (from Kénitra)	451 / 451	100.0%
country appended	Ait Meloul, Maroc	451 / 451	100.0%
padded / doubled spaces	Ait Meloul	451 / 451	100.0%
separators changed	Ait-Meloul	451 / 451	100.0%
spaces removed	AitMeloul	451 / 451	100.0%
one letter dropped	Ait Melul	287 / 412	69.7%

The typo row is the one deliberate shortfall. Tolerance scales with name length and is zero at five characters or fewer, so Saka is never quietly corrected into Safi. That costs 125 of 412 single-letter typos, which surface to an agent as an unrecognised city rather than as a parcel sent to the wrong town.

4 Against live traffic, not test data

SOURCE	ROWS	DISTINCT SPELLINGS	RESOLVED TO A LOCALITY	OF THOSE, DELIVERABLE
Orders handed to Coliaty	30	10	30 (100.0%)	30
Leads captured	559	311	516 (92.3%)	380

The 35 lead spellings that did not resolve break down as **27 arabic script**, **7 not a place name**, **1 unrecognised spelling**. Only the first is a gap worth closing, and closing it needs data Coliaty holds — see the requests overleaf.

What we found in the catalogue

Three findings, in the order they cost Coliaty money. None of them break dispatch today — our side absorbs all three — but each is cheaper to fix at source than to keep absorbing.

Finding 1 — 7 places published twice

The catalogue returns 451 rows for 444 distinct destinations. 7 places carry two `city_ids` each. Both ids in every pair sit in the same hub, which is why this is a housekeeping item and not a routing risk: whichever id a parcel carries, it reaches the same hub. We link one id per place and ignore the other; if Coliaty retires the id we kept, those parcels start failing.

PLACE	FIRST ENTRY	SECOND ENTRY	HUB	SAME HUB
Aghmat	#9126 Aghmat [AGMT]	#7382 Aghmat [AGT]	MARRAKECH	yes
Ain Allah	#7868 Ain Allah [ALH]	#9463 ain Allah [AINLH]	FES	yes
Ain Bida	#6974 Ain Bida [ABD]	#7874 Ain Bida [Bida]	TANGER	yes
Belaaguid	#9120 Belaaguid [BLG]	#7394 Belaaguid [BLD]	MARRAKECH	yes
Kaf Nsour	#7850 Kaf Nsour [KAFNS]	#9036 kafnsour [KAF]	BENIMELLAL	yes
Khenichet	#8030 Khenichet [KNC]	#7316 Khenichet [KHT]	Kenitra	yes
Sidi Allal Tazi	#8765 Sidi Allal Tazi [sdt]	#7292 Sidi Allal Tazi [ATZ]	Kenitra	yes

Finding 2 — the catalogue carries no coordinates

Coliaty publishes a name, a code and a hub for each city, and no position. We geocode all 444 names ourselves to place them on a map and to check they sit near the hub that serves them — 5,644 came from OpenStreetMap, 121 needed a name-only geocoder lookup, and **46 destinations still have no position at all**. A geocoder answers confidently for the wrong town, so every city is measured against the **median** position of its hub — a hub serves a compact area, and a city far from its siblings is usually misplaced. **63 sit more than 120km out**.

Distance is a prompt, not a verdict. Some flagged cities are genuinely remote — Dakhla really is 650km from the Laayoune hub. Others are plainly wrong: **Inzegane** is plotted on Casablanca's coordinates when Inezgane borders Agadir. We resolve each by hand today. One latitude/longitude column in the catalogue would remove the guesswork for every one of them.

CITY	SENT AS	HUB	FROM CENTRE	COORDINATES	SOURCE
Houara	Houara	AGADIR	673 km	35.6328, -5.9677	osm
Dakhla	Dakhla	LAAYOUNE	650 km	23.6941, -15.9431	osm
Ouled Yahia	oulad yahya	MARRAKECH	617 km	34.7946, -2.4883	osm
Goulmane	Boulmane	FES	583 km	30.0326, -8.9410	osm
Afra	Afra	Oujda	567 km	30.7109, -6.2352	osm
Douar Soultan	Douar Soultan	MARRAKECH	493 km	35.7286, -5.9009	nominatim
Ouled Moussa	Ouled Moussa	BENIMELLAL	456 km	34.8182, -2.2447	nominatim
Tifelt	tifelt	Khemisset - Tifelt	449 km	30.1861, -8.9348	osm
El aroui	El aroui	Oujda	448 km	33.5540, -7.4826	nominatim
Wawizeght	Wawizght	BENIMELLAL	431 km	34.8043, -2.5578	osm
Douar Bouaaza	Douar Bouaaza	MARRAKECH	402 km	34.3563, -5.1075	nominatim
Inzegane	Inzegane	AGADIR	399 km	33.5548, -7.6000	nominatim

The 51 remaining flagged cities and all 46 unplaced ones are marked in the directory at the back.

Finding 3 — no Arabic spelling is published

The catalogue is Latin-script only. Customers on Moroccan landing pages type Arabic, and **27 distinct Arabic-script entries across 33 leads** cannot be matched to a destination — the single largest unresolved category, ahead of both junk input and misspellings. These are not obscure places: they are Marrakech, Fès, Tetouan, Oujda, Casablanca, Salé and Nador, all of which Coliaty already serves. We hold Arabic names for OpenStreetMap rows, but a deliverable city has nothing authoritative to match against.

The Arabic entries themselves are not reproduced here — the base PDF fonts have no Arabic glyphs and no right-to-left shaping, so printing them would produce disconnected, reversed letters. They are in the audit data and can be sent as a plain list. What matters is the shape of the gap: one `city_name_ar` column would resolve all 33 of them.

What we are asking Coliaty for

Two kinds of request. The first is coverage — cities and hubs, set out over the next two pages. The second is catalogue data: six fields and one endpoint that would close gaps we cannot close from our side at any effort. Each row below is justified by a number measured in this report, not by preference.

REQUEST	FIELD OR ENDPOINT	WHAT IN THIS REPORT JUSTIFIES IT
Coordinates per city	latitude, longitude on each catalogue row	We geocode all 444 names ourselves. 46 still have no position and 63 sit more than 120km from their hub's centre, each needing a manual call. Coliaty already knows where its own destinations are.
Hub centre coordinates	hub_latitude, hub_longitude	Our hub centres are inferred as the median of each hub's members, which is a workaround. It is also what every distance in this report is measured from, including the 63 flags.
Arabic city names	city_name_ar	27 distinct Arabic-script entries across 33 leads cannot be matched today. All of them are cities Coliaty already serves.
Deduplicated ids	one city_id per place, or a canonical flag	7 places are published under two ids each. We keep one and ignore the other; if the one we kept is retired, those parcels fail.
Trimmed, consistent fields	no leading/trailing spaces, one casing convention for city_code	Names arrive with trailing spaces and codes arrive in mixed case, so every consumer has to normalise before comparing. It is a one-line fix at source and a permanent class of bug downstream.
A versioned catalogue endpoint	updated_at + a change webhook	Our copy is a dated snapshot. Nothing tells us when a city is added, renamed or retired, and 141 destinations already depend on an exact carrier spelling — an unseen rename becomes a rejected parcel.
Documented, per-account rate limits	a published quota keyed to the account rather than the IP	The limit is undocumented and enforced per IP, answering 429 with a temporary block. We carry exponential backoff with jitter, a global pause, request coalescing and a label cache purely to stay under an unknown ceiling.

Hub sites we are proposing

Every town in the growth list was measured to the nearest existing hub centre. 24 of them are further than 120km from any hub, which puts them beyond an extended run. Grouping those by what a single site within 70km could cover gives the list below — lettered to match the map on page 1. **Orders** counts destinations in that cluster our customers have already asked for and we could not serve.

	PROPOSED SITE	TOWNS IT BRINGS IN	ORDERS ALREADY ASKED FOR	NEAREST EXISTING HUB	DISTANCE
A	Ifrane Atlas-Saghir 29.2188, -9.4911	4 Ifrane Atlas-Saghir, Taghjijt, Aguerd Tamanart, Fam El Hisn	0	AGADIR	125 km
B	Amezrou 30.3079, -5.8237	4 Amezrou, Timtig, Tagounite, Tazzarine	0	OUARZAZAT	133 km
C	Talsint 32.5355, -3.4395	3 Talsint, Bni Tadjite, Bouanane	3	ERRACHIDIA	137 km
D	Fritissa 33.6194, -3.5469	3 Fritissa, Tindite, Tissaf	2	FES	130 km
E	Touissit 34.4791, -1.7685	2 Touissit, Sidi Boubker	3	OUJDA	121 km
F	Tiggane 29.6041, -8.0166	2 Tiggane, Akka	1	AGADIR	163 km

Sites covering a single town with no orders behind them are not listed as hub proposals — they are cheaper to serve by extending the nearest hub, and appear in the city table overleaf instead.

Cities we are proposing for the catalogue

160 localities Coliaty does not currently list, drawn from the 5,386 non-deliverable rows we hold and filtered to real settlements — OpenStreetMap cities and towns, plus villages and suburbs somebody has actually tried to order to. Villages without demand are excluded on purpose: a douar is served through the town beside it, not by its own catalogue entry.

93 within 60 km — catalogue row	43 60–120 km — extend a run	24 beyond 120 km — new site	60 already asked for
---	---------------------------------------	---------------------------------------	--------------------------------

The first column is the ask that costs nothing. 93 of these towns sit within 60km of a hub centre Coliaty already operates — inside the working radius of vans that pass them today. Adding them is a catalogue row, not a route. We can supply coordinates, French and Arabic names and OpenStreetMap ids for every one.

Ordered by demand, then by how close the nearest hub already is

	CITY	TYPE	NEAREST HUB	DISTANCE	WHAT IT NEEDS	ORDERS
1	Casa Anfa	suburb	CASABLANCA	15 km	catalogue row only	2
2	Ihaddaden	town	OUIJDA	19 km	catalogue row only	2

64	Al Machouar Stinia	town	Meknes	9 km	catalogue row only	—

96 further proposed cities are held in the audit data and can be supplied as a spreadsheet or through the API in whatever shape Coliaty prefers.

Reference: every destination, hub by hub

All 444 destinations, with the identifiers we hold for each and the name each parcel leaves under. Within a hub, cities are ordered by distance from the hub's median centre, so anything worth a second look sits at the top of its section. Rows tinted red sit beyond 120km; rows tinted sand have no coordinates yet.

HUB BENIMELLAL			66 cities · 14 unplaced			9 TO CHECK
